How do i reverse google image search on iphone

Have a question? Use Google and you'll find the answer to just about anything. The trick is to be efficient in your search and selective about your sources. Keep this list of 12 effective Google search tips handy so that you can have better and more relevant results. Searching Exact Phrases Random search terms lead to random results. Here are tips to create concise search terms: Quotes: Find information on an exact phrase or term by putting quotation marks around your phrase in the search box. Multiple words: Focus your search with multiple terms or words. You can type in the word "or" to do this. For example, search the phrases "Best ways to write a resume OR How to write a resume" in order to concisely cover all bases. Titles: Find sites you need with qualifiers (remember the colon). For example, type "electric cars intitle: new models." Or, search URLs by swapping out "intitle:" for "inurl:" or "allinurl:" for helpful sites. Search for websites with answers in the text with these qualifiers: "intext:" or "allintext:." You'll get succinct results. Searching by Eliminating Words For a concise search, type in a term, phrase or question with words that you don't want the search engine to find. Use a minus symbol or a hyphen to sharpen searches. For example, for information about Jaguars, but not the car or football, type in "Jaguars -cars." Or, do a triple elimination by typing in "Jaguars -cars -sports -football." Searching Images There are two tips to keep on hand for Google image searches: Find an image: Use the same search parameters for text and images. Click on the "Images" tab right below the search bar for images relating to your search, or type into the browser bar "🔍" to search from there. Find information about an image: Google recognizes uploaded images and offers sites with related information. Click the camera icon on the Google search bar for prompts, or drag and drop images into the search bar. General Searching Tips If you're happy with using a basic Google search, there are a couple of tricks to keep your results tight: Adding search words: Plug in a simple phrase in the search bar and add as you go. As an example, start with "resumes," then add "examples of resumes," and on the third try, type in "examples of chronological resumes." Use critical words: Google matches your query with keywords online. Use important words and words that are used in websites for refined results. Google Search Commands There are little-known Google search commands. Here's a list of four commands to keep within reach: PDFs: Search for PDFs by typing your search term plus "filetype:pdf." For example, if you're looking for information about how to coupon, simply type in "coupons filetype:pdf" and you'll find relevant PDFs. Weather: There's no need for an app, simply type "weather" plus your zip code. Definitions: For a quick lookup, type "define" plus the word you want to look up. Time: To find out the time anywhere in the world, type "time" followed by wherever you want to know the exact time. Commands reduce your search into one click. MORE FROM QUESTIONSANSWERED.NET A reverse image search is handy to find the origin of a picture on the net. It works just like a regular search, but instead of inputting words, you upload an image into the search engine of your choice, and it will show you which websites have used that image. Of course, it's possible with multiple apps, so let's learn more about how to reverse image search on the iPhone. How to Do a Reverse Image Search on iPhone or iPad Using Safari Open Safari on your iPhone or iPad and go to Next, tap on Upload an image – Choose File – Photo Library (or one of the other options) Select the picture and tap on Done to upload it and see results for this image. Note: You may also follow the above steps in Chrome. In step 2, tap on three dots icon from the bottom right and then tap on Request Desktop Site. How to Do a Reverse Image Search with Google App on iPhone and iPad Download the Now, you may point the camera at an object and see the results. For an existing image, tap on photo icon from top right – Give photo permission – Select the image, and in a few seconds, you will see the results. Lens offers multiple tools to get the best out of an image. You may tap on the translate icon, text icon, shopping cart icon, and dining icon for more relevant results. How to Use Google Lens as a Reverse Image Search on iPhone or iPad You can also use Google Lens from the Google Photos app. For this, open Google Photos – tap on image – tap on the lens icon from the bottom of the screen. Best Reverse Image Search Websites and Apps Website for Reverse Image Search Besides Google, you can use one of the various sites to perform this action. Bing's reverse image search engine is one of the finest. Definitely try this. Bing Images TinEye Yandex Images Reverse Image Search Apps for iPhone When you use a reverse search app, you can access its shortcut quickly from the share sheet when you are in iPhone's Photos app. That's all, folks! Signing off... These were the most popular ways to reverse image search on the iPhone and iPad. All the techniques are straightforward, and it is up to you to choose and use the one you prefer. Please know that the pictures you upload to Google may be stored for seven days. Google may use it to make their products and services better. Similarly, for other services, proceed with caution. Do not upload any personal image or document if you are hesitant. You may also like to read... Which method are you going to use for reverse image search? Will you use browsers like Safari and Chrome or install an exclusive app? Let us know in the comment section below. Image Search is the ability to search on a term and find images related to what you typed. Most search engines offer it, and it's great. But what if you have an image and want to know its origin? Or find similar photos? That's a reverse image search. Google's reverse image search is a breeze on a desktop computer. Go to images.google.com, click the camera icon, and either paste in the URL for an image you've seen online, upload an image from your hard drive, or drag an image from another window. Google Image Search on the desktop But what about when you're on a mobile device and want to do a reverse image lookup? There are options. *Deals are selected by our partner, TechBargains Google Reverse Image Search on Mobile Google built a reverse image search function into phones and tablets, albeit on a limited basis. When you fire up images.google.com on mobile, the camera icon won't show up in the search bar. To get it, you'll need to load the desktop version on your mobile device. It works in Safari, but it performs best in the Chrome browser app (iOS or Android). In Safari, tap the aA icon on the top left and select Request Desktop Website. In Chrome, tap the three-dot menu, scroll down on the menu that pops up, and select Request Desktop Site. On both browsers, that will load the desktop version of Google Images, and the camera icon will appear. Then you can upload photos from your camera roll. Google Image Search on Chrome for iOS Depending on your phone, Chrome also supports a reverse image search workaround. When you see the image in your browser that you want to search, hold your finger on it until a pop-up menu appears; pick Search Google for This Image at the bottom. Note: This will NOT work in the Google app or other browsers (not even in Safari). It only works in Chrome. If for some reason this doesn't work, you can also select Open Image in New Tab. Then copy the URL, go back to images.google.com, and paste in the URL. With either method, reverse image search results then appear; you may have to click a More sizes option up top to see only the images. You'll get options to narrow your query, such as finding animated GIFs, clip-art equivalents, or looking by the color scheme used in the original image. Google Lens also offers a reverse image search option. Lens has its own app, but is also part of the Google app, Google Photos, and Google Assistant, on iOS and Android. However, Lens is really more about helping you perform tasks, like instant translation, identifying things, or finding a product to buy, than it is for finding a source image. Bing Visual Search on Mobile Bing Visual Search as viewed in Safari on iOS That other big search engine, Bing from Microsoft, also does reverse image searches, but calls it "visual search." Click Bing's camera icon on any mobile browser or in the Bing app. A pop-up says that in order to search with an image, you'll need to give Bing access to your camera; accept or decline with a tap. On the next screen, tap the Browse button on the bottom left. A pop-up menu will let you take a photo, browse your photo library, or browse third-party services. Tap browse to find photos stored in third-party services like iCloud Drive, Google Drive, and Dropbox. The latest versions of the Bing app (iOS and Android) let you snap a photo and image search it immediately. You can upload a photo from your camera roll, scan a QR code, or point your camera at text or math problems (cheaters!). Third-Party Image Search Engines There are a few search engines out there dedicated to looking up just pictures, but not all of them work directly with your smartphone or the default browsers. TinEye It has crawled over 52 billion images to date. TinEye allows search by URL, upload, or drag-and-drop on the desktop. On mobile, just click that upload (up arrow) icon to get options to take a photo, use one from the library, or upload from third-party services. Yandex Russia's Yandex search engine looks a bit like Bing-goes-Cyrillic. It has a unique image search that works on mobile devices right from the browser. Click Images, tap the camera icon in the search bar, and you get the usual options: take a photo, upload a photo, or find a photo in a third-party service. There are also search engines geared specifically toward helping creatives find out if their creative work has been stolen. Check out Berify and Pixsy for options. Be warned, using them might cost you. However, they'll also track stolen images for you automatically and offline, alerting you if an image of yours is used without permission. Then you can go collect on the theft, and that makes them worth using. Apps for Reverse Image Search If you prefer apps over the browser, go directly to a reverse image search tool you keep on your smartphone at all times. CamFind Free for Android and iOS This is a basic tool for taking shots with your smartphone and searching for similar items, as well as getting price comparisons if it's a product shot. Search By Image Free for Android You can manipulate an image all you want before uploading via this app to get results from Google, Bing, TinEye, and Yandex. Reverse Free for iOS This app sends your pics directly into the Google Images database to search for similar images, but upgrade to the pro version for \$3.99 via an in-app purchase to get results from Bing and Yandex as well. Reverse Image Search: Eye Lens \$2.99 subscription for iOS This one isn't an app you go into, but rather an app that adds an extension to other apps. It will put one of those extension buttons inside Photos, Facebook, and other apps, so along with Copy or Send, you'll have an option to Search Image. Results appear in your mobile browser and come from Google, TinEye, and Yandex. Sign up for Tips & Tricks newsletter for expert advice to get the most out of your technology.
